Little Miss Nonfat

Math Class: or, Does the Zero Have Buddha-Nature™?

Two works for spoken chorus in four parts

Duration: LMNF, 1:20 MC, 1:45

I attended a macrobiotic meeting in Boston in 1979 where there was to be an entertainment at the end given by attendees. I quickly wrote *Little Miss Nonfat* as a composition that anyone who could read music could perform. However, my search for performers was in vain. In the spring of 1982 I was back in school at NTSU in Denton Texas, studying physics and math, and wrote *Math Class* out of that experience. Both are inspired by the “Geographical Fugue” of Ernst Toch.

Both these works have been greatly expanded and arranged for chorus and orchestra, and are now incorporated into *Strange Songs*.

Performance notes:

The parts labeled A, B, C and D indicate the natural pitch of the voices, with A highest and D lowest. This does not necessarily correspond to SATB, as any group may perform the pieces. Also, any number of voices may be on each part; it works quite well with just four voices. Theatrics, overacting, and inappropriate venues are encouraged.
